

The issues prevalent during the time period in which this project was written have had significant impact on the way it was completed. This is explained by the following table.

Event/Issue	Potential/actual impact on project	Action(s) taken to mitigate impact on project	Remaining Impact
Unable to work with group in person.	Lapse in communication. This may lead to inconsistent project goals and less focused work. Specifically programming together and the benefits of pair-programming were lost.	Online tools were utilised to collaborate with each other. We used Google's Collaboratory to all work on the projects code and Overleaf for report writing.	The scope of the project became limited. Specifically, the scope of modelling and experimentation.
Face-to-face supervision could not take place after quarantine measures.	Supervision was limited by the ability to communicate online. This was adequate sometimes, but limited expression possible in regular contact.	Online meetings taking place even over the holidays to compensate. Utilising video conferencing tools to still visually communicate.	Little impact.
Access to internet resources and tools was regularly temporarily unavailable due to a poor internet connection	The depth available in explanations and derivations was limited due to the lack of access to materials required. Ability to attend meetings became less consistent.	Utilising cellular internet connection where possible and downloading resources pre-emptively. Deadline for submission was extended.	Little impact but missing a small number of online meetings.
