Introduction

Contents

This questionnaire was sent out in a pack addressed to the carer of the study child when her/his study child was 134 months old. The pack contained a copy of "Lifestyle and Health of Mother" for the carer to complete and a copy of this questionnaire to hand to her/his partner if they wished to do so. It is in 11 sections. Section A asks about dizziness, balance and shortness of breath while section B contains standard ALSPAC health related questions, including allergies, hospital admissions and chest pain. Section C asks about urinary problems and section D about accidents, injuries and their impact. Section E contains the anxiety subscale of the Crown Crisp Experiential Index (Crown & Crisp, 1979) and the Edinburgh Postnatal Depression scale (Cox, Holden, & Sagovsky, 1987). Section F asks about life events since the study child's 9th birthday while section G contains a variety of questions about activities and lifestyle including: sleep, smoking, exposure to household chemicals, methods of travel, TV and household activities. Section H looks at activity in the workplace and section I at recreational activity. Section J contains questions on financial matters and tea and coffee consumption. Finally, section K collects the usual "back page" information on who completed the questionnaire and when.

There was only one version of this questionnaire.

Sample & response rates

There are a total of 14,895 records on this built file. This number is made up of the 14,541 pregnancies in the core ALSPAC sample (regardless of whether or not the 134-month partner questionnaire was sent out for them or whether they were returned) plus 354 eligible pregnancies not in the core sample for which the questionnaire was sent out. Note that this questionnaire was completed for 156 of these 354 pregnancies.

Of the 14,541 pregnancies in the core ALSPAC sample, 13,868 resulted in at least one live born child. The 134-month partner questionnaire was sent out for 6,772 (49%) of these pregnancies. As of 31st July 2008 completed questionnaires had been returned for 3,484 (51%) of these pregnancies, which is 25% of the 13,868 pregnancies that resulted in at least one live born child. For further information on the ALSPAC sample, please see section 5 of the "Guide to ALSPAC data" which can be found in the "Collaborator Pack" on the ALSPAC documentation CD.

Format of this documentation

The bulk of this documentation consists of the text of the questionnaire and frequency tables of the variables on the data file. These are inserted section by section after the relevant text. Where any editing has occurred a description has been embedded in the questionnaire text.

LIFESTYLE AND HEALTH OF PARTNER

All answers are confidential

20/05/02

This questionnaire is for the study child's father or person taking the role of father.

It will help us to catch up with some current problems you may have, as well as some features of your lifestyle.

Some of the questions we are asking may seem remote from the health of your study child, but the answers will help us to plan for studying the changes that will be occurring in our children as they develop, and how these may be passed down from one generation to the next.

To answer simply tick the box which is most accurate in your opinion.

If you do not want to answer a question or if it does not apply to you, put a line through it. There are no good or bad answers. Just tell us what is true for you.

THANK YOU FOR YOU HELP

Yes No → If **no**, go to J9 on page 54

If **yes**,

b) How often is the tea you drink decaffeinated?

Always Usually Sometimes Never

PAGE 54 OF THE QUESTIONNAIRE

J6. We would like to ask how much tea, on average, you drink per day:

- a) *If possible, please tell us first about the size of your cups and mugs. It would help us if you measured, in a measuring jug, the amount of liquid that your usual cup and/or mug contains. This will be in 'fl.oz' or 'mls'. If you can't measure them, don't worry, just tick the box to show which you use, and then go straight to J6b below.*

(i) I use a cup \rightarrow fl.oz or mls.

[Editing: Two outlying metric measurements, one each of 25ml & 900ml, were recoded to -1. Two outlying imperial measurements, one each of 25fl.oz & 30fl.oz, were set to -1. A single variable for volume in ml (rounded to the nearest 25ml) was created using a conversion factor of 1fl.oz = 28.41ml for imperial measurements. If both imperial and metric measurements were reported then the metric one was taken.]

(ii) I use a mug \rightarrow fl.oz or mls.

[Editing: Two outlying metric measurements of 33ml and one each of 30ml & 40ml were recoded to -1. Four outlying imperial measurements of 50fl.oz and one each of 0fl.oz, 2fl.oz & 90fl.oz were set to -1. A single variable for volume in ml (rounded to the nearest 25ml) was created using a conversion factor of 1fl.oz = 28.41ml for imperial measurements. If both imperial and metric measurements were reported then the metric one was taken.]

- b) How many cups of tea per day do you drink, on average? * cups a day
- c) How many mugs of tea per day do you drink, on average? * mugs a day

* If you only drink the occasional cup and/or mug write 97

J7. How strong is the tea you normally drink?

Strong Medium Weak

J8. Describe the type of tea that you drink most often (e.g. Tesco Premium, Typhoo, Sainsbury's Red Label, Tetley Decaffeinated):

J9. a) Do you drink coffee?

Yes No \rightarrow If no, go to Section K on page 56

b) How often is the coffee you drink decaffeinated?

Always Usually Sometimes Never

PAGE 55 OF THE QUESTIONNAIRE

- J10. a) If possible, measure the size of the cup and/or mug that you normally use for coffee, as described in J6 on page 54.

(i) I use a cup → fl.oz or mls.

[Editing: Four outlying imperial measurements, one each of 0fl.oz, 25fl.oz, 30fl.oz & 40fl.oz were set to -1. A single variable for volume in ml (rounded to the nearest 25ml) was created using a conversion factor of 1fl.oz = 28.41ml for imperial measurements. If both imperial and metric measurements were reported then the metric one was taken.]

(ii) I use a mug → fl.oz or mls.

[Editing: Two outlying metric measurements of 33ml and one each of 30ml & 50ml were recoded to -1. Three outlying imperial measurements of 50fl.oz and one of 60fl.oz were set to -1. A single variable for volume in ml (rounded to the nearest 25ml) was created using a conversion factor of 1fl.oz = 28.41ml for imperial measurements. If both imperial and metric measurements were reported then the metric one was taken.]

- b) How many cups of coffee per day do you drink, on average?*

cups a day

- c) How many mugs of coffee per day do you drink, on average?*

Derived Variables**Number of contributors**

The number of contributors to the questionnaire is the number of boxes ticked in question K1. It was derived by recoding (1 = 1)(else = 0), summing and then copying across missing values from the components.

This variable details the combinations of respondents reported in question K1. It is calculated by recoding values of 1 to powers of 2 (1, 2, and 4 for parts a to c respectively) and all other values to 0 and summing. Missing values in the components are then copied across.

Appendix A

This appendix contains the general coding instructions that are referred to whenever any questionnaire is being coded. This document provides a general overview to the coding process as well as defining abbreviations for standard methods that are used in the specific coding instructions for the questionnaire (see Appendix B).

General coding instructions for ALSPAC questionnaires – 3rd revision 12th December 2003

These are to be used in conjunction with the specific instructions for each questionnaire.

General Coding instructions for ALSPAC questionnaires – 3rd revision

What is “coding”?

The coder's main task is to ensure that each questionnaire is easily keyable. This means that the ticks that the respondent has written relate clearly to one box, and only one, that where numbers are required, words have not been written, and to check that the meaning of the question or the stated answer has not been adjusted by the respondent editing the question or qualifying the answer with words that make it not applicable.

Remember that a blank answer should always be left blank. It is not our task to infer what the respondent meant to say.

In cases where a box has been struck out, it should be considered as blank, meaning no answer given, except in rare instances where the specific coding sheet for the questionnaire indicates that a struck-out box should be considered as a zero.

What data are keyed?

The keying company will key either 1) the small code number in the box which has been ticked as the answer to a given question, or, 2) the numeric answer written by the respondent. All text is keyed whether freely written at the side of the answers or asked for by us on a “Please describe” dotted line.

Clarity

If you have to clarify a ticked response where the respondent has amended an answer, simply ring round the box containing the correct response and strike out with a single oblique line any answers that the respondent has crossed out. If you have to clarify numbers which the respondent has written, it is often necessary to strike out the given response, draw new box(es) close to the old one(s), and write the correction in them. On occasions it is necessary to put a response down which is not in the range of printed boxes. Instructions for this would be given in the coding sheet specific to the particular questionnaire.

Clear printing of numbers is most important. Use only the Arabic numerals 0,1,2,3,4,5,6,7,8,9. To avoid confusing 1 and 7, write the 7 with a line through it. Numbers should be right justified. If the number does not fill the available number of boxes, then the leftmost ones should be filled with zeros.

Striving for accuracy

It is better to work more slowly and check the questionnaires properly, rather than plough through mounds of work quickly but inaccurately. If there are any coding queries or the printed instructions do not deal adequately with the responses given, always check with the supervisor. If the matter cannot be resolved at the time, write the question number on a yellow “Post-It” sticky label and attach it to the top of the relevant page so that it is clearly visible in the batch. It is the individual coder’s responsibility to see that the query is resolved before the batch of questionnaires is packed away.

Do not attempt to cross check the response to one question with something the respondent has written elsewhere in the questionnaire (logical editing will be taken care of later by the data preparation team).

Make sure that “skips” (If no/yes, go to question X.....) are observed and that the appropriate Yes or No in the lead question has been answered.

Final checks

This is a most important stage. At the end of the coding of a run of questionnaires, the coders will go through the questionnaires a second time in order to check the first coder’s marking and find any omissions. No coder checks their own original coding. If serious or consistent coding errors are found in the checking procedure, it is the responsibility of the individual coder to bring it to the attention of the original coder who may have been misreading instructions. The supervisor will perform a validation check on each person’s work at regular intervals in order to strive for maximum accuracy.

Practical details

Make sure that all questionnaires in a batch are kept together.

Make corrections to the questionnaire in green, so that the coder's decisions can be seen distinctly. However, if the respondent has written in green, use red for the corrections, and write a note on the front cover saying that you have corrected in red.

When starting a new batch of questionnaires, first verify that all the booklets that are in the batch are the correct ones by comparing and ticking off the i.d. numbers on the printed computerised list that is wrapped round the batch. There should be 20 booklets in the batch (unless it is the very last batch in the run). If any on the list are missing, or if there are any extras, we need to sort out the muddle before the batch can be sent on for keying.

All questionnaires in the same batch should have the same version date printed on the front cover. If a questionnaire of a different version has been included in the batch, hand it to the supervisor to deal with separately, cross out the number on the list and write "Wrong version" alongside. At the top of the list write "19 questionnaires only" or whatever.

Similarly, if a questionnaire is found to be totally blank, hand it to the supervisor, then cross out the number on the list, write "Blank" alongside and "19 questionnaires only" or whatever, at the top.

When you have finished a questionnaire put your initials in the Coders Initials box at the bottom of the back page. When all queries from the batch have been resolved, and all the booklets have been coded, the batch can move on to the next stage.

If the respondent has written anything on the questionnaire which needed to be acted upon by our administration, e.g. Changes of address, corrections of names, changes of marital status or surname, a decision to opt out of the survey etc, it will be stamped "Copied", indicating that the post department have noted the information. If the given information is not stamped "Copied", copy both the i.d. number from the front cover of the questionnaire and also the details of the information on to a separate sheet and hand it to the supervisor.

Specific details

Dates

- a) It is important that dates should always be coded in the order day/month/year.
- b) The rules of padding from the left with 0's apply to the days and to the months separately.
- c) If the year is stated but the day and/or month are left unfilled or are described as not known, then code the unknown element(s) as 99.
- d) In contrast, if the year is blank or stated as not known, but other elements of the date have been written, leave the unknown year blank so that there is no ambiguity with 1999.
- e) If the whole date is left totally blank, leave all blank.

Coding instructions

Each type of questionnaire has its own unique coding sheet. To carry out the instructions by a standardised method, the abbreviations that have been used are:

7 If more than one box is ticked, ring around the one with the lowest number in the specific range, and put a line through the other responses. If only one box is ticked, or no boxes are ticked, no action is required from the coder.

8 If more than one box is ticked, ring around the one with the highest number in the specific range and put a line through the other responses. If only one box is ticked, or no boxes are ticked, no action is required from the coder.

I If more than one box is ticked, and the muddle cannot be resolved by reference to any written comment on the form, refer the problem to the supervisor or put a yellow sticky label at the top of the page to show that the matter must be resolved before the batch of questionnaires is packed away. If only one box is ticked, or no boxes are ticked, no action is required from the coder.

PP File – Appendix A

II Code as a number.

Make sure that the answer is in the required units, e.g. weeks rather than months, or pints rather than glasses, or whatever, and remember that fractions are not allowed. There will be rules in the coding instructions as to whether to round fractions up or down, for each question where it is likely to occur.

Other possible 'non-standard' indications by the respondent:

If answer stated as not known, code as 9, 99, 999 or 9999 - depending on field length (i.e. fill as many boxes as the field requires). For this occurrence with dates see above.

If "occasional" is stated where a number is required, this is usually coded as 97. There are occasionally other codes in the 90 range to be used as indicated in the coding instructions.

If "none" or "nil" is stated for a numeric response, code as zero.

If there is no response, or they reply "Not applicable", "N/A" or something equivalent, leave the boxes blank.

IV Code as ddmmyy for days, months, years. See instructions above about dates.

"Other, please describe" questions

Where information is written on an "other, please describe" line, it is necessary to check various points. Firstly, the information given there should not fit into one of the other categories in the question. If it is the same, recode it as that category, but if there is doubt, or it is clearly different, leave it as "other". Secondly, if there is information written on the line, it should have the corresponding box ticked. If there is no box ticked, then draw an extra box at the side and enter the code "zero" - indicating a relevant comment has been given, but we don't know which "yes" category to put it into.

Answers written in "Other, please describe" sections will not be coded at this stage. These responses will be keyed verbatim, and coded at a later stage. This has the advantage of being able to decide how to group the responses when the complete range is known. However, such responses are not available for analysis until relatively late on in the survey, and some sections, notably those with a historical perspective, have structured textual replies e.g occupation, childhood diary.

[Version 3 of General Coding Instructions first written 3/6/92 (modified on 20 January 2000) by Hugh Simmons]

Appendix B

This appendix contains the coding instructions specific to this questionnaire.

Coding instructions for first version (20/05/02) “Lifestyle and Health of Partner”

All questionnaires in the same batch should have the same 'Date of form' on their front cover. Keep all the questionnaires in a batch together.

Coding the “Lifestyle and Health of Partner” replies

Follow the general rules outlined in the "General coding instructions for ALSPAC questionnaires - 2nd revision" document.

In addition, make sure that any names or other identifiers of the respondent are obliterated.

Front Cover

Check that the questionnaire number is legible, and that the date of form is 20/05/02.

If the questionnaire is all blank, e.g. the woman didn't want to fill in the form, write "BLANK" on the front cover and hand it to the supervisor.

Appendix C: Questionnaire Methodology

Administration

Questionnaires were identified by a check-summed identifier (QUESTIONNAIRE ID) that is unique to both the recipient and the particular questionnaire. No reminders were issued specific to partner questionnaires.

On receipt of returned questionnaires by ALSPAC the return was logged in the central database. If returned blank by the respondent (but not, for example, if returned as “not known at this address”) this was flagged. Any signed comments on the back page were dealt with as appropriate and the completed questionnaires batched together in batches of 20.

Data handling

The expected responses to the questions fall into three categories: self-coding tick boxes, numeric and free text. However, respondents do not always answer the questions in the way expected. For example, they may tick more than one box in response to a question where only one response was expected or they may write a comment in place of ticking a box, perhaps if they feel that none of the options applies. For this reason students were employed to code the completed questionnaires under the supervision of a permanent member of ALSPAC staff who specialised in coding to prepare them for keying. Each questionnaire was first coded according to the rules set out in the ALSPAC general coding instructions (see Appendix A) and the specific coding instructions for this questionnaire (see Appendix B) and then checked by a different member of the team.

The coded questionnaires were then sent to an external keying bureau together with specifications of how the data should be keyed. All numeric and tick box data were double keyed and returned to ALSPAC in a number of CSV (comma separated values) data files. All text responses (both solicited and unsolicited) were keyed once only and returned in comma delimited text files.

On receipt the numeric data files were read into SPSS, added together and labelled appropriately. The data were then range checked and any out of range values corrected by inspection of the completed questionnaire. The administrative identifier (QUESTIONNAIRE ID) was converted to the research identifier ALN. At the end of this process the data were classified as clean; they are as close as will be got to what the respondent actually entered on the questionnaire, with the proviso that the free text is not included. The free text has been read into a database and is available on request under special confidentiality rules for projects that require it.

In order to prepare the data for general release the clean data were matched to the information about dispatch and return held in the ALSPAC administrative database. This enabled creation of variables for all members of the cohort indicating whether or not a questionnaire was sent out, whether it was returned etc. The variables were renamed according to a unique system to ensure there are no conflicts with variable on other data files. All variable names start with the letter “pp” which are followed by four digits and occasionally a further letter. Then the data from the back page were edited as described in the relevant section of this documentation. For data in other sections the only edits applied were to recode values of 9 that indicated an unsolicited text response of “Don’t know” to –9. Note that where there was actually a tick box category for “Don’t know” that was coded as 9 that these values remain as 9. Also, values of 0 indicating some other unsolicited text response

were recoded to –8. See Table 1 for an overview of the common missing values on this data file.

Table 1: Common missing value categories on release files and their interpretation

Value	Label	Comment
-1	No response	The respondent did not answer this particular question. This may be due to following a skip statement in the questionnaire text as well as simply not attempting to answer the question.
-8	Text response	The respondent wrote something next to a question expecting either a numeric response or a tick box response and the coders were unable to apply any of the available options
-9	Don't know	The respondent wrote "Don't know", or something similar, next to a question expecting either a numeric response or a tick box response where there was no option for "Don't know".
-10	Not completed	No completed questionnaire is available for this case. Variable PP0007a = 2 for all such cases.

At some point in the future the data may be reissued as a "built" file with an edited version of the data adjusting for illogical responses, dealing with skip statements and adding useful derived variables.
