Appendix C	Questionnaire Methodology	Page 118

#### Introduction

#### Contents

This questionnaire was sent out to study children when they were 169 months old. It is in 7 sections. Section A contains questions about school and section B questions about the neighbourhood where the respondent lives. Section C contains the questions from the PLIKS measure, which assesses psychosis-like symptoms and is based on DISC-IV (Shaffer D., 2000), modified slightly after piloting, and the Schedules for Clinical Assessment in Neuropsychiatry (SCAN) version 2.0 (World Health Organization, 1994). Section D asks about relationships with parent figures and section E about attitudes to learning. Section F contains questions on smoking and drug use. Finally, section G collects the usual "back page" information on who completed the questionnaire and when.

#### **Questionnaire versions**

There was only one version of this questionnaire.

#### Sample & response rates

There are a total of 15,187 records on this built file. This number is made up of the 14,676 fetuses in the core ALSPAC sample (regardless of whether or not the 169-month questionnaire was sent out for them or whether they were returned) plus 511 eligible children not in the core sample for whom the questionnaires were sent out. Note that this questionnaire was completed for 269 of these 511 children not in the core sample.

Of the 14,676 fetuses in the core ALSPAC sample, 14,062 were live born. The 169-month questionnaire was sent out for 10,059 (72%) of these live born children. As of 16<sup>th</sup> January 2008 completed questionnaires had been returned for 5,768 (57%) of these children, which is 41% of the 14,062 live born children. Note that 5 of these questionnaires belong to children from triplet or quadruplet pregnancies. For reasons of confidentiality the data from these questionnaires are not available (all variables have been set to –11), but the administrative variables (CCR001 – CCR007a) remain visible, with CCR007a set to 2 "No". For further information on the ALSPAC sample, please see section 5 of the "Guide to ALSPAC data" which can be found in the "Collaborator Pack" on the ALSPAC documentation CD.

#### Format of this documentation

The bulk of this documentation consists of the text of the questionnaire and frequency tables of the variables on the data file. These are inserted section by section after the relevant text. Where any editing has occurred a description has been embedded in the questionnaire text.

#### Release file version history

Release version 1a – January 2008

The first version of the release file.

#### Release version 1b - October 2008

This version of the release file removes triplets/quadruplets for confidentiality reasons.

Questionnaire Number

# Life of a Teenager

Don't forget!

Use <u>crosses</u> in the boxes when you answer the questions

THANK YOU VERY MUCH FOR YOUR HELP

06/12/2005

1

## PAGE 2 OF THE QUESTIONNAIRE

## Just a few things we need to tell you!

Please use <u>black</u> or <u>dark blue</u> pen

If you make a mistake, shade the box in like this:

then cross the correct box

If you are writing words make sure they are inside the box, like this:

I went to school

Make sure that numbers are clear like this:

3

	Day	Month	_		Yea	ır	
G2. What is your date of birth?		/	/	1	9	9	

[Editing: Note that this reported date of birth is not used.]

[Editing: The date of completion was substituted with the date of receipt of the questionnaire from ALSPAC's administrative database if any of the following occurred: The date of completion was not fully completed, the date of completion was not a valid date (e.g. 31<sup>st</sup> November), the date of completion was later than the date of receipt or the date of completion was earlier than the date on which the questionnaire was sent out by ALSAPAC. This action was flagged in variable CCR990c. The month and year of completion were retained on the built file, but the day was dropped.]

# **Appendix A**

This appendix contains the general coding instructions for scanned questionnaires that are referred to whenever any questionnaire is being coded. This document provides a general overview to the coding process as well as defining abbreviations for standard methods that are used in the specific coding instructions for the questionnaire (see Appendix B).

General coding instructions for *electronically scanned* ALSPAC questionnaires – first version, 5th December 2005.

These points are taken and adapted where necessary from the "General coding instructions for ALSPAC questionnaires – 3rd revision" document. They are to be used in conjunction with the specific instructions for each questionnaire.

### **General guidelines:**

Check that the meaning of the question or the stated answer has not been adjusted by the respondent editing the question or qualifying the answer with words that make it not applicable.

Remember that a blank answer should always be left blank. It is not our task to infer what the respondent meant to say.

In cases where a box has been struck out, it should be considered as blank, meaning no answer given.

Logical editing will be taken care of by the data preparation team.

#### Dates:

- a) If the <u>year is stated</u> but the day and/or month are left unfilled or are described as not known, then code the unknown element(s) as 99.
- b) In contrast, if the <u>year is blank or stated as not known</u>, but other elements of the date have been written, leave the unknown year *blank* so that there is no ambiguity with 1999.
- c) If the whole date is left totally blank, leave all blank.

### **Coding instructions:**

Each type of questionnaire has its own unique coding sheet. To carry out the instructions by a standardised method, the abbreviations that have been used are:

- If more than one box is crossed, record the one with the lowest number in the specific range
- 8 If more than one box is crossed, record the one with the highest number in the specific range
- I If 'Yes' <u>and</u> 'no' are crossed in a <u>stand-alone</u> question, then leave the question blank. However, if the Yes/No have both been marked in a lead question with 'If Yes...' or 'If No...' after it, then the answer should be obvious from the information given after the 'If Yes/No'.

### II Code as a number.

Make sure that the answer is in the required units, e.g. weeks rather than months, or pints rather than glasses, or whatever. There will be rules in the coding instructions as to whether to round fractions up or down, for each question where it is likely to occur.

Other possible 'non-standard' indications by the respondent:

If answer stated as not known, code as 9, 99, 999 or 9999 - depending on field length. For this occurrence with <u>dates</u> see above.

If "occasional" is stated where a number is required, this is usually coded as 97. There are occasionally other codes in the 90 range to be used as indicated in the coding instructions.

If "none" or "nil" is stated for a numeric response, code as zero.

If there is no response, or they reply "Not applicable", "N/A" or something equivalent, leave the boxes blank.

IV Code as ddmmyy for days, months, years. See instructions above about dates.

### "Other, please describe" questions

Where information is written in an "other, please describe" box, check various points:

- 1. The information given there should not fit into one of the <u>other categories</u> in the question. If it is the same, recode it as that category, but if there is doubt, or it is clearly different, leave it as "other".
- 2. If there is information written in the box, it should have the corresponding box marked. If it is not possible to assign an answer to a corresponding box, (which happens often in qualitative answers) then assign the code "zero" indicating a relevant comment has been given, but we don't know which "yes" category to put it into.

# **Appendix B**

This appendix contains the coding instructions specific to this questionnaire.

### Coding instructions for first version "Life of a Teenager" (06/12/05)

These questionnaires have all been electronically scanned.

### **Coding the "Life of a Teenager" replies**

For data preparation follow the general rules outlined in the "General Coding Instructions For Electronically Scanned ALSPAC Questionnaires – First Version, 5th December 2005".

<u>In addition, run through the whole questionnaire to make sure that any names or other identifiers of the respondent are deleted. These are not always in the text answers.</u>

Page 36 Section G		

G1		If both "Yes" and "No" are answered, code as blank unless an answer has been given in a) or b) in which case code as 2.
G1a,b		There should be either a cross or a blank here.
G2	IV	There is only one case in the cohort born in 1990. The year should otherwise be either 91, 92 or Jan/Feb (only) 93.
G3	IV	If this question is blank, copy the date of receipt from the front cover. Watch out for dates at the turn of the year as the stated year is sometimes incorrect!

END OF QUESTIONNAIRE Life of a Teenager (06/12/05)

# **Appendix C: Questionnaire Methodology**

### Administration

Questionnaires were identified by a 9 digit check-summed identifier (QUESTIONNAIRE ID) that is unique to both the recipient and the particular questionnaire. These numbers, together with bar codes, were printed on sticky labels that were then applied to the front pages of the questionnaires prior to being mailed out. If a response was not received after 3 weeks a reminder letter was sent.

The receipt of questionnaires was logged by the Questionnaire Administration Department using a bar code scanning system, which recorded the date of receipt. If returned blank by the respondent (but not, for example, if returned as "not known at this address") this was flagged. The questionnaires were examined and if badly completed (e.g. marks not in boxes) or if text was written outside of supplied boxes then the office use box on the back page was marked in order to flag that detailed checking was required at the verification stage (see below). Any signed comments on the back page were dealt with as appropriate and the completed questionnaires batched together in batches of 20, separately for the male and female versions.

### **Data handling**

The questionnaires were designed using the Teleform data capture software. They were the first questionnaires completed by the study children to be designed in this way, although the Teleform system had previously been used for the carer and partner adult learning questionnaires and for staff completed forms from the Focus clinics. The questionnaires were booklets with A5 pages, stapled in the folded spine. The expected responses to the questions fall into four categories: self-coding tick boxes, numeric, free text and occasionally constrained print (text entered one letter to a box).

Completed questionnaires had the spine guillotined off and were then fed into a document scanner. The data were captured from the resulting images by the Teleform software. Any anomalies, such as multiple ticks or numeric / constrained print responses that the system could not interpret were flagged by the software and corrected by an operator at the verification stage. During verification the captured free text was also checked for accuracy. The rules for correcting multiple ticks and other anomalies were set out in the ALSPAC general coding instructions (see Appendix A) and the specific coding instructions for this questionnaire (see Appendix B). The numeric, tick box and any constrained print data were then exported to an SPSS data file and the free text exported to a database. The images of the forms were exported to the ADOS image storage system for archiving.

The SPSS data files then had appropriate variable and value labels applied. The administrative identifier (QUESTIONNAIRE ID) was converted to the research identifiers ALN & QLET. At the end of this process the data were classified as clean; they are deemed to accurately represent what the respondent actually entered on the questionnaire, except that the text responses have not been processed. The free text is available on request under special confidentiality rules for projects that require it.

In order to prepare the data for general release the clean data were matched to the information about dispatch and return held in the ALSPAC administrative database. This enabled creation of variables for all members of the cohort indicating whether or not a

questionnaire was sent out, whether it was returned etc. The variables were renamed according to a unique system to ensure there are no conflicts with variable on other data files. All variable names start with the letters "ccr" which are followed by three digits and occasionally a further letter. Then the data from the back page (section G) were edited as described in the relevant section of this documentation.

At some point in the future the data may be reissued as a "built" file with an edited version of the data adjusting for illogical responses, dealing with skip statements and adding useful derived variables.
