Introduction

Contents

This questionnaire was sent out to study children when they were 198 months old. It is in 15 sections. Section A asks the respondent about how they spend their time, section B contains the 11 item Chalder Fatigue Scale and a question about school attendance and section C asks about life events. Section D contains the questions from the PLIKS measure, which assesses psychosis-like symptoms and is based on DISC-IV (Shaffer D., 2000), modified slightly after piloting, and the Schedules for Clinical Assessment in Neuropsychiatry (SCAN) version 2.0 (World Health Organization, 1994). contains the 12 item Nowicki-Strickland Locus Of Control Scale, with an additional Section F contains questions on alcohol use and section G question on self-image. questions on smoking and drug use. Section H contains the Short Moods and Feelings Questionnaire (Angold et al., 1995; Messer et al., 1995), adapted to include some more "happy" questions after feedback from TAP (the cohort's "Teenage Advisory Panel"). Section I ask about asthma and allergies and section J about eating disorders. Section K contains the Arnett Inventory of Sensation Seeking (Arnett, 1994) whilst section L asks about deliberate self-harm. Section M asks about transport use and accidents and section N about employment and occupation. Finally, section O collects the usual "back page" information on who completed the questionnaire and when.

Questionnaire versions

There was only one version of this questionnaire.

Sample & response rates

There are a total of 15,154 records on this built file. This number is made up of the 14,676 fetuses in the core ALSPAC sample (regardless of whether or not the 198-month questionnaire was sent out for them or whether they were returned) plus 478 eligible children not in the core sample to whom the questionnaires were sent out. Note that this questionnaire was completed by 225 of these 478 children not in the core sample.

Of the 14,676 fetuses in the core ALSPAC sample, 14,062 were live born. The 198-month questionnaire was sent out to 9,516 (68%) of these live born children. As of 10th November 2009 completed questionnaires had been returned for 4,906 (52%) of these children, which is 35% of the 14,062 live born children. For further information on the ALSPAC sample, please see section 5 of the "Guide to ALSPAC data" which can be found in the "Collaborator Pack" on the ALSPAC documentation CD.

Note that 5 of the 5,131 completed questionnaires belong to children from triplet or quadruplet pregnancies, all of whom are in the core sample. For reasons of confidentiality the data from these questionnaires are not available. The administrative variables CCS0001 to CCS0007 remain, but CCS0007a has been set to 2 "No" and all other variables have been set to –11.

Format of this documentation

The bulk of this documentation consists of the text of the questionnaire and frequency tables of the variables on the data file. These are inserted section by section after the relevant text. Where any editing has occurred a description has been added by the relevant frequency tables.

Release file version history

Release version 1a - January 2010

The first version of the release file.

Release version 1b - July 2017

Text responses for Section L (deliberate self-harm) have now been coded and included in this version of the release file. Frequencies for other variables in this section have also been updated to better reflect the logic of the questionnaire (i.e., taking skip statements into account). Note also that due to ambiguities in responses, variables ccs6548 and ccs6582 have been removed and the text responses to these questions combined with variables ccs6571 to ccs6582f (see comment in Section L for further details).

ABOUT THIS QUESTIONNAIRE

- ➤ Thank you for filling in this questionnaire.
- ➤ We realise it is quite long but a lot of interesting things are happening to you!
- ➤ ALL your answers are confidential. They are kept under code numbers, not your name, so no-one can find out what you have said.
- ➤ We realise how sensitive and personal some of the questions are, but it is important for scientific research to find out what is happening to teenagers and how they really think and feel.
- ➤ You might want to talk to someone about some of the subjects in this questionnaire, so we have included details of confidential Helplines on a separate sheet.

FILLING IN THE QUESTIONNAIRE

Use black or blue pen

Answer questions with a cross in the box, like this:

If you are writing words make sure they are inside the box, like this:

If you make a mistake, shade the box in like this

then cross the correct box.

PAGE 4 OF THE QUESTIONNAIRE

PAGE 9 OF THE QUESTIONNAIRE

SECTION D: YOUR CURRENT FEELINGS						
The next set of questions is about feelings and experiences that you may have had.						
D1. Some people believe that other people can read their thoughts. Have other people ever read your thoughts?						
Yes, definitely ¹ ☐ Yes, maybe ² ☐ No, never ³ ☐ → If no, go to D2 on page 10						
If yes, go to D1a) below						
a) How often have other people read your thoughts since your 15th birthday?						
Once or twice go to D1b) below						
Less than once a month 2 □ → go to D1b) below						
More than once a month ₃ □ → go to D1b) below						
Nearly every day 4 □ → go to D1b) below						
Not at all 5 ☐ → go to D2 on page 10						
b) Were you upset by this?						
No, not at all upset 1 Yes, a bit upset 2						
Yes, quite upset 3 ☐ Yes, very upset 4 ☐						
c) Do you think people sometimes used special powers to read your thoughts?						
Yes, definitely 1 ☐ Yes, maybe 2 ☐ No, never 3 ☐						
d) If people have read your thoughts, did this happen only within 24 hours of using or taking cannabis or other drugs?						
Yes, only within 24 hours of using □ □ cannabis or other drugs						
No, it happened at other times too ² 51251

PAGE 27 OF THE QUESTIONNAIRE

SECTION H: MOODS AND FEELINGS

These questions are about how you may have been feeling or acting recently. For each question, please say how much you think you have felt or acted this way in the **past two WEEKS.**

	In the past 2 weeks:	True	Sometimes true	Not true
H1.	I felt miserable or unhappy	1 🔲	2	3 🔲
H2.	I have been having fun	1 🔲	2 🔲	3 🔲
Н3.	I didn't enjoy anything at all	1	2	3
H4.	I felt so tired that I just sat around and did nothing	1	2 🔲	3
H5.	I was very restless	1	2	3
H6.	I felt I was no good any more	1	2 🔲	3
H7.	I cried a lot	1	2	3
H8.	I felt happy	1	2 🔲	3 🔲
H9.	I found it hard to think properly or concentrate	1	2 🔲	3
H10.	I hated myself	1	2 🔲	3 🔲
H11.	I enjoyed doing lots of things	1	2	3
H12.	I felt I was a bad person	1	2 🔲	3 🔲
H13.	I felt lonely	1	2	3
H14.	I thought nobody really loved me	1 🔲	2 🔲	3
H15.	I thought I could never be as good as other kids	1	2	3
H16.	I felt I did everything wrong	1 🔲	2 🔲	3 🔲
H17.	I have had a good time	1 🔲	2 🔲	3

Note that in the questionnaire there was an earlier set of questions asking about seeking medical help when YP last hurt themselves, consisting of two check boxes and an openended text response. While the two check box questions have been kept (ccs6546 and ccs6547; above), during coding it was found that YP's tended to respond to the 'other' item with more general help-seeking (rather than medical help-seeking). As this text variable did not relate to the question asked, answers were combined with responses to general help-seeking questions (ccs6571 TO ccs6582f; below) and the original variable was removed from this version of the release file.

Appendix A

This appendix contains the general verification instructions for scanned questionnaires that are referred to whenever any questionnaire is being verified. This document provides a general overview to the verification process as well as defining abbreviations for standard methods that are used in the specific verification instructions for the questionnaire (see Appendix B).

General Verification Instructions

Document Control

Version	1
Date of introduction	12/03/2008
Date of termination	
Number of pages	2
Author	David Herrick

For general guidance on scanning and verifying see the relevant page on the ALSPAC intranet:

http://alsp-buzzard.alspac.bris.ac.uk:9080/ALSPNet/projects/Scanning/scanning.html

The purpose of verifying is to resolve the queries produced by the software. The general aim is to ensure that the exact response is entered, regardless of whether or not it makes sense. Genuinely reported values that are unlikely or even impossible will be resolved at a later stage of the data preparation process.

When verifying a scanned form you will need to reference the specific verification instructions for that form. These will detail the data type of each response on the form and any verification rules additional to the general guidelines specified below:

Code	Data Type	General Verification Guidance
S	A single check box that the respondent can either cross or leave blank.	
М	Multiple check boxes from which the respondent is expected to either cross one or leave all blank.	Occasionally respondents will cross more than one box; the verification instructions for the form will detail how to resolve any such occurrences. The following codes are used as shorthand for commonly occurring instructions:
		7: If more than one box is crossed, choose the one with the lowest code number.
		8: If more than one box is crossed, choose the one with the highest code number.
		I: If 'Yes' and 'No' are both crossed in a stand-alone question, then leave the response blank. However, if 'Yes' and 'No' are both crossed in a lead question then it should be possible to determine the intended response from the information in the follow up questions.
		If it is clear that the respondent attempted to cancel a cross by filling in a box then discard that value.

N	A numerical response. The respondent is provided with one or more boxes within which they are expected to write Arabic numerals (one per box).	 The verifier will query anything that it cannot recognise as a number. Please note the following general guidelines: If "N/A" or question marks or anything similar are written in the boxes, leave as blank. If more than one digit has been written in any box then enter the value if it is possible to do so (i.e. there were enough boxes but the digits were misplaced). However, if the response is too large for the number of boxes (e.g. 11 where only a single digit is expected) then record it in the form notes and leave the value as blank. If the answer is not legible on the scanned image and therefore cannot be corrected then record in the form notes and leave the value as blank. It may be possible for the value to be corrected later on by looking at the paper copy of the questionnaire. In addition the verifier may also be set up to query values outside of a specific range (this will be documented in the verification instructions for the form). If a queried value is clearly what was written then accept it even if it is outside the range of values in the verification rule. This applies even if the value is impossible (e.g. value 34 in a response for number of hours per day). 				
D	A date. The respondent is provided with boxes within which to write the numerals of a date. Some boxes may be prefilled.	The general guidelines for numerical responses apply here. In addition note that the verifier will query any invalid dates, including any dates where there are empty boxes. As with numerical responses these should be left as reported by the respondent. In the days of keyed questionnaires coders were instructed, for example, to use the date of receipt to fill in missing dates of completion. This sort of thing is not required of validation – the date captured should be as reported.				
С	Constrained text. The respondent is provided with a series of boxes within which to write text; one character per box.	The text should be entered as close as is possible to what the respondent wrote, so observe errors in spelling, grammar etc. It is not possible to enter more characters than there are boxes on the questionnaire. Longer responses must be recorded in the form notes. Note that it is not possible to enter the character "?". If the respondent wrote "?" as part of the response in the text box then enter this as "[Question mark]".				
Т	Unconstrained text. The respondent is provided with a large box within which to write freely.	The verifier will attempt to interpret this but will almost always flag for verification if anything is detected. Simply type in the text response as best you can. The text should be entered as close as is possible to what the respondent wrote, so observe errors in spelling, grammar etc. Note that if the response is split over several lines then if captured in multiple lines this formatting can be kept, but new line breaks cannot be inserted. Note that it is not possible to enter the character "?". If the respondent wrote "?" as part of the response in the text box then enter this as "[Question mark]". Occasionally the verification instructions for the form will instruct you to enter something new in an unconstrained text box (e.g. details of multiple crossing in data type M). To do this click on the box on the form and start typing in the grey area below. In order to differentiate between text from the respondent and text entered at verification start anything you add with "V: " and enclose in square brackets, e.g. "[V: 1+2+5]".				

Appendix B

This appendix contains the verification instructions specific to this questionnaire.

Verifying version 1 of "Life of a 16+ Teenager"

This document provides specific verification instructions for this form. It must be read in conjunction with the "General Verification Instructions" document.

Form Details

Appendix C: Questionnaire Methodology

Administration

Questionnaires were identified by a 9 digit check-summed identifier (QUESTIONNAIRE ID) that is unique to both the recipient and the particular questionnaire. These numbers, together with bar codes, were printed on sticky labels that were then applied to the front pages of the questionnaires prior to being mailed out. If a response was not received after 3 weeks a reminder letter was sent.

The receipt of questionnaires was logged by the Questionnaire Administration Department using a bar code scanning system, which recorded the date of receipt. If returned blank by the respondent (but not, for example, if returned as "not known at this address") this was flagged. The questionnaires were examined and if badly completed (e.g. marks not in boxes) or if text was written outside of supplied boxes then the office use box on the back page was marked in order to flag that detailed checking was required at the verification stage (see below). Any signed comments on the back page were dealt with as appropriate and the completed questionnaires batched together in batches of 20, separately for the male and female versions.

Data handling

The questionnaires were designed using the Teleform data capture software. The questionnaires were booklets with A5 pages, stapled in the folded spine. The expected responses to the questions fall into four categories: self-coding tick boxes, numeric, free text and occasionally constrained print (text entered one letter to a box).

Completed questionnaires had the spine guillotined off and were then fed into a document scanner. The data were captured from the resulting images by the Teleform software. Any anomalies, such as multiple ticks or numeric / constrained print responses that the system could not interpret were flagged by the software and corrected by an operator at the verification stage. During verification the captured free text was also checked for accuracy. The rules for correcting multiple ticks and other anomalies were set out in the ALSPAC general coding instructions (see Appendix A) and the specific coding instructions for this questionnaire (see Appendix B). The numeric, tick box and any constrained print data were then exported to an SPSS data file and the free text exported to a database. The images of the forms were exported to the ADOS image storage system for archiving.

The SPSS data files then had appropriate variable and value labels applied. The administrative identifier (QUESTIONNAIRE ID) was converted to the research identifiers ALN & QLET. At the end of this process the data were classified as clean; they are deemed to accurately represent what the respondent actually entered on the questionnaire, except that the text responses have not been processed. The free text is available on request under special confidentiality rules for projects that require it.

In order to prepare the data for general release the clean data were matched to the information about dispatch and return held in the ALSPAC administrative database. This enabled creation of variables for all members of the cohort indicating whether or not a questionnaire was sent out, whether it was returned etc. The variables were renamed according to a unique system to ensure there are no conflicts with variable on other data files. All variable names start with the letters "ccs" which are followed by three digits and

occasionally a further letter. Then the data from the back page (section O) were edited as described in the relevant section of this documentation.

At some point in the future the data may be reissued as a "built" file with an edited version of the data adjusting for illogical responses, dealing with skip statements and adding useful derived variables.
